Agentes IA RAG & Vectores

RAG, o Retrieval-Augmented Generation, es una técnica de inteligencia artificial que combina la recuperación de información con la generación de texto. En esencia, RAG permite a los modelos de lenguaje (LLM) acceder a una base de conocimientos externa para responder preguntas de forma más precisa y fundamentada. 

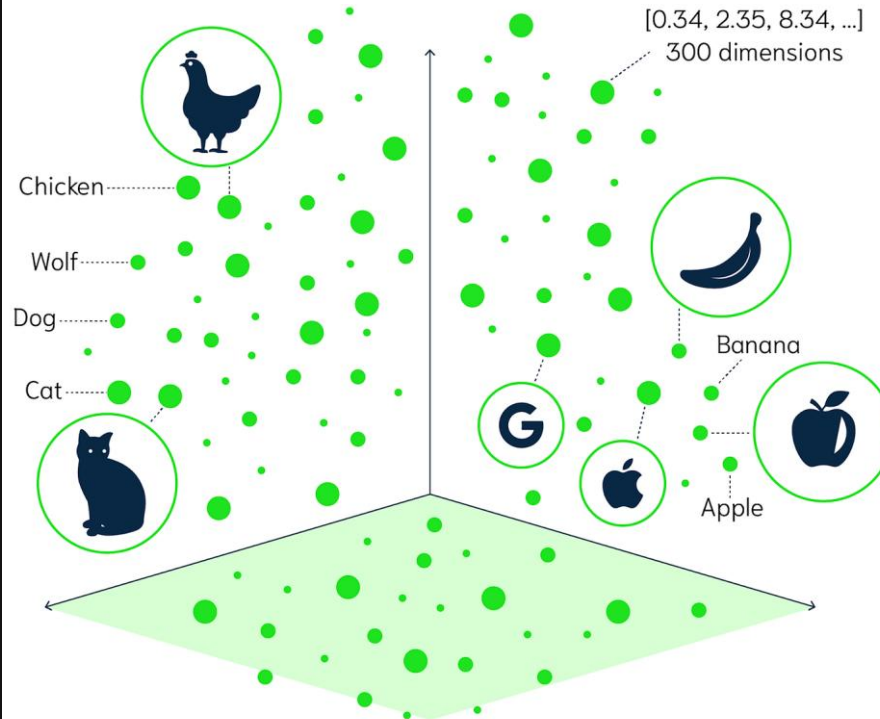

Vectores en IA

- Es una secuencia de números que representan datos.
- Modelan características específicas (ej., intensidad de color, frecuencia de palabra).
- Permiten la representación de datos en un espacio multidimensional.
- Facilitan tareas de clasificación, búsqueda semántica y reconocimiento de patrones.
- Convierten información compleja en una forma manejable por algoritmos.

What is Vector Similarity?

In simple terms, it is a measure of how different (or similar) two or more vectors are. Think of a vector as a list of numbers.

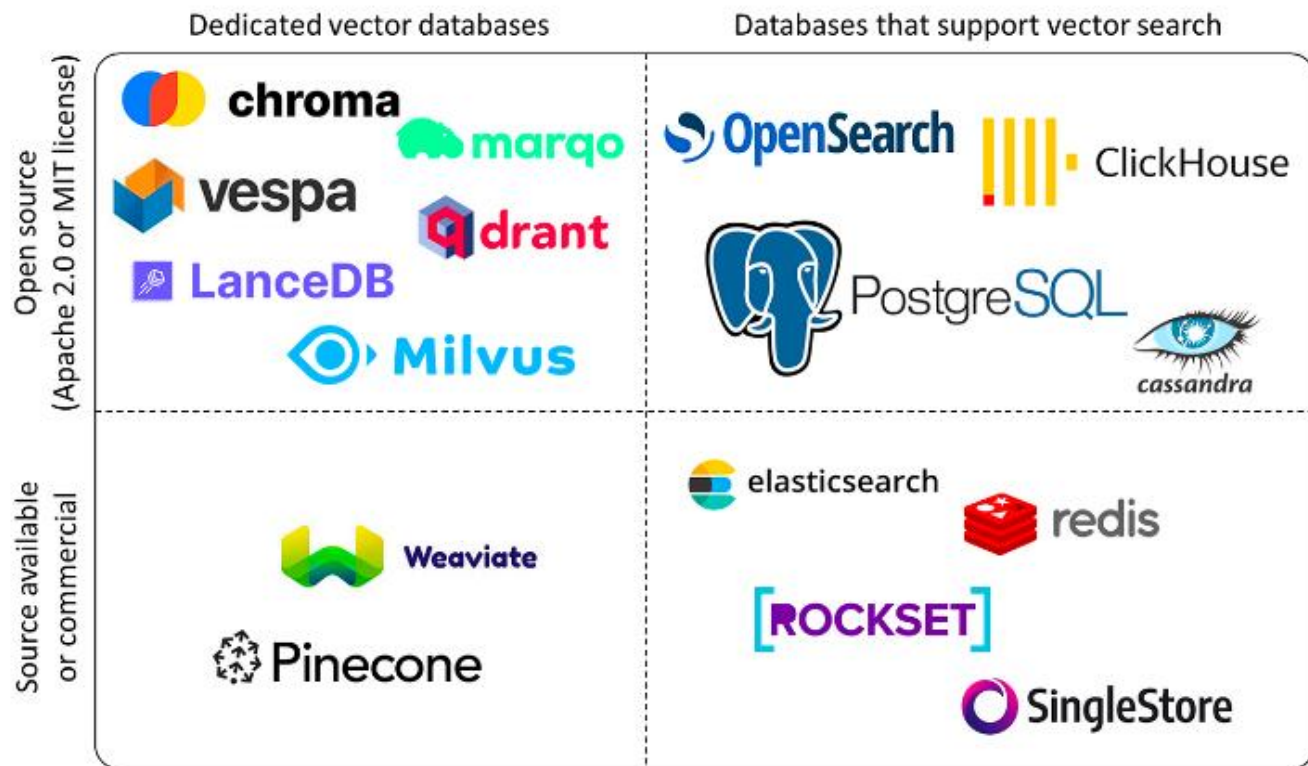

Indexación de vectores

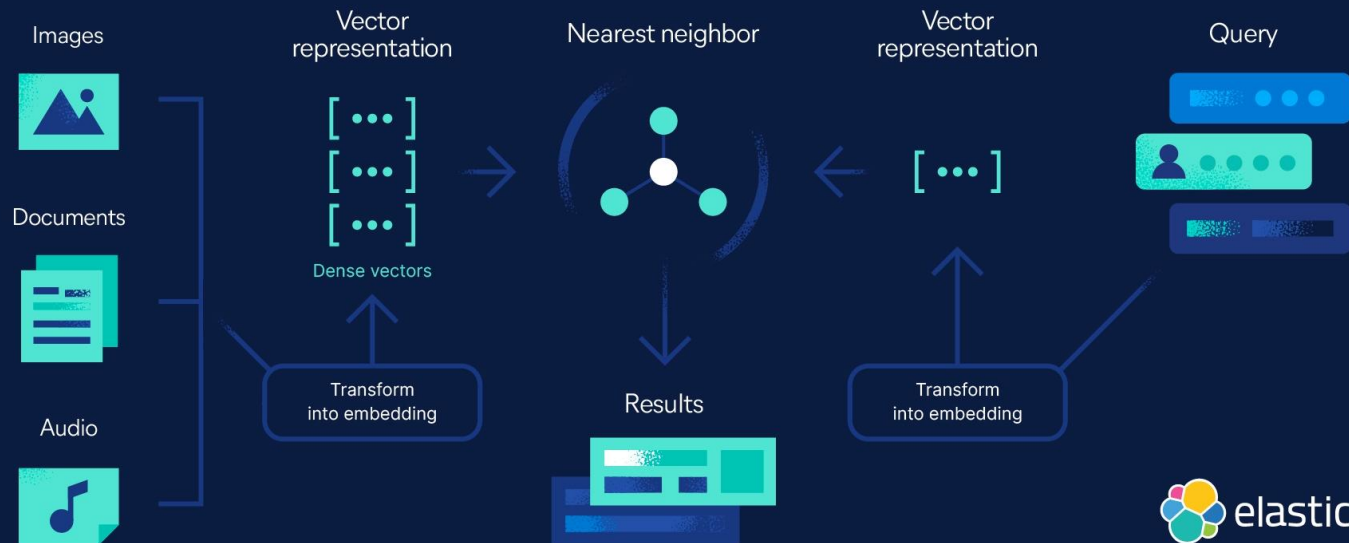

- Es un proceso para organizar datos para lograr búsquedas rápidas.
- Funciona como "tabla de contenidos" para los datos.
- Mejora rendimiento y velocidad de las consultas en grandes volúmenes de datos.

RAG & Vectores

Traditional search vs. vector search

	Traditional (Keyword) Search	Vector Search
SEARCH APPROACH	Matches the exact keywords.	Finds related objects that share similar characteristics.
AMBIGUITY HANDLING	Struggles with ambiguous language and synonyms.	Uses machine learning models to handle synonyms and ambiguous language.
RELEVANCE	Works well for precise queries.	Superior for broad or fuzzy queries.
SPEED AND SCALABILITY	Fast, scales well due to simple index reading.	Less efficient and struggles with scaling due to complex vector calculations.
SEARCH QUALITY	Mostly depends on exact keyword matching.	Uses semantic relationships, thus better handling of broad queries.
COST	Generally less due to lower computational requirement.	Usually higher due to the need for more computing power.

Guía para construir tu propio agente de IA

- **Definir objetivos:** ¿qué tarea deseas automatizar o resolver?
- **Identificar capacidades necesarias:** NLP, scraping, visualización, aprendizaje, etc.
- Elegir **framework** adecuado (según capacidades y usuarios involucrados)
- **Configurar integraciones** (APIs, CRM, base de datos)
- **Entrenar o ajustar** (si aplica aprendizaje automático)
- **Probar e iterar:** validar escenarios, recolectar feedback y ajustar

Recomendaciones clave:

- Asegurar escalabilidad futura
- Priorizar herramientas amigables si hay usuarios no técnicos
- Garantizar seguridad y privacidad de datos
- Favorecer flexibilidad y personalización
- Aplicaciones prácticas para eficiencia empresarial
- Los agentes de IA se están integrando en operaciones empresariales para: Automatizar servicio al cliente, Analizar datos y generar insights, Automatizar procesos (ej. nóminas, inventarios) y Coordinar reuniones y seguimiento

OpenAI - Playground

The screenshot shows the OpenAI developer platform interface. At the top, there's a navigation bar with links to Playground, Dashboard, Docs, and API reference. A left sidebar contains a search bar and a list of categories: Function calling, Conversation state, Streaming, File inputs, Reasoning, BUILT-IN TOOLS (Using built-in tools, Web search, File search, Computer use), AGENTS (Building agents, Voice agents, Agents SDK), and REALTIME API (Using the Realtime API). Below these are links to Cookbook, Forum, and Help.

The main content area is titled "OpenAI developer platform". It features a "Developer quickstart" section with a 5-minute timer and a code snippet in Python:

```
python
1 from openai import OpenAI
2 client = OpenAI()
3
4 response = client.responses.create(
5     model="gpt-4.1",
6     input="Write a one-sentence bedtime story about a unicorn."
7 )
8
9 print(response.output_text)
```

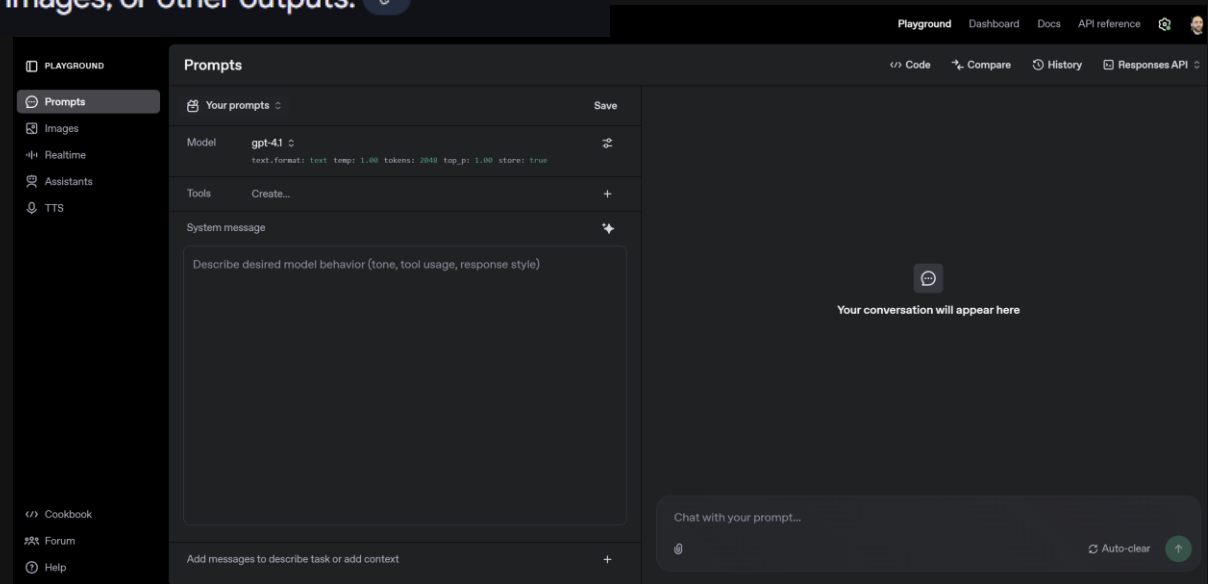

Below the quickstart is a "Browse models" section with a "View all" link. It displays three model cards:

- GPT-4.1**: Flagship GPT model for complex tasks
- o4-mini**: Faster, more affordable reasoning model
- o3**: Our most powerful reasoning model

<https://platform.openai.com/docs/overview>

OpenAI - Playground

Prompt engineering is the process of crafting or structuring instructions (prompts) to elicit the desired output from a generative AI model. It involves providing context, instructions, and examples to guide the model towards a specific response. Effective prompts can improve the accuracy, relevance, and coherence of AI-generated text, images, or other outputs.

OpenAI - Playground

Un almacén de vectores (vector store) es un sistema especializado diseñado para almacenar y recuperar eficientemente datos representados como vectores, que son representaciones matemáticas de datos. Son fundamentales en aplicaciones de inteligencia artificial y aprendizaje automático, permitiendo búsquedas eficientes basadas en similitud, en lugar de búsquedas exactas de palabras clave. 

<https://platform.openai.com/playground/assistants>

OpenAI - Playground

Un asistente de IA (Inteligencia Artificial) es un software que utiliza la inteligencia artificial para ayudar a los usuarios a realizar tareas, responder preguntas y gestionar información. Estos asistentes pueden variar desde asistentes virtuales personales como Siri o Alexa, hasta herramientas más especializadas en tareas como la creación de código o la gestión de proyectos. 

The screenshot displays the OpenAI Playground interface. On the left sidebar, the model is set to 'gpt-4o-mini'. Under the 'TOOLS' section, 'File Search' is enabled, and a 'Vector store for PE_BOT' is listed. The 'MODEL CONFIGURATION' section shows the 'Response format' as 'JSON'. The main chat area shows a conversation between 'User' and 'PE_BOT'. The user asks 'cual es la ley 20.555?'. The assistant responds with a detailed explanation of the Ley N° 20.555 (Ley DICOm), mentioning its purpose in regulating commercial information and data protection. At the bottom, there is a text input field 'Enter your message...' and a 'Run Ctrl + Enter' button. A footer note states: 'Playground messages can be viewed by anyone at your organization using the API.'

Agent Garden Versión preliminar

Búsqueda

Descubre, aprende y usa un conjunto seleccionado de muestras y herramientas de agentes para acelerar su desarrollo.

Ejemplos

Esquemas personalizables ya compilados con código fuente, archivos de configuración y ejemplos de prácticas recomendadas.

Data Science

Queries diverse data across multiple sources using natural language, builds predictive models, visualizes trends, and communicates key insights in a clear way.

ADK

FOMC Research

Extracts web data, analyzes complex topics with limited input, executes custom functions, and generates summary reports from multi-modal data...

ADK

Travel Concierge

Orchestrates personalized travel experiences and provides support throughout the user's journey, from initial planning to real-time itinerary alerts.

ADK

Brand Search Optimization

Analyzes top brand-related keywords and competitor search results, compares content elements like titles and descriptions, and generates suggestions to...

ADK

Customer Service

Delivers support by analyzing issues found in streamed videos or uploaded images. Provides relevant recommendations, discounts, helps...

Retrieval-Augmented Generation (RAG)

Uses RAG to get information from specified knowledge sources, ensuring responses are factually grounded, context-aware, and up-to-date.

LLM Auditor

Evaluates LLM-generated answers, verifies actual accuracy using the web, and refines the response to ensure alignment with real-world knowledge.

Personalized Shopping

Delivers personalized recommendations, tailored to specific brands, merchants, or marketplaces.

The screenshot shows the Google Cloud console interface for the Gemini 2.5 Pro Preview model. The top navigation bar includes the Google Cloud logo, a user profile icon labeled 'uai-dev-dlk', a search bar with the text 'Buscar (/) recursos, documentos, productos y más', and a 'Buscar' button. The main content area is titled 'Gemini 2.5 Pro Preview' with a 'Versión preliminar' badge. Below the title is the tagline 'Strongest model quality, especially for code & complex prompts.' and three buttons: 'Abrir en Vertex AI Studio', 'CO Abrir notebook', and 'Ver código'. A tabbed interface shows 'Latest' as the active tab, with 'Overview' and 'Documentation' also visible. A prominent message box states: 'La capacidad de procesamiento aprovisionada está disponible para Gemini 2.5 Pro Preview. Obtén garantías de disponibilidad y capacidad de procesamiento de aplicaciones importantes que usan modelos de base de Google. [Más información](#)'. Below this, there are links for 'Administrar pedidos' and 'Realizar pedido'. The 'Latest' section describes Gemini 2.5 as a 'thinking model' designed for complex problems. On the right side, technical details are listed: 'ID de modelo' (publishers/google/models/gemini-2.5-pro-preview-05-06) and 'Nombre de la versión' (google/gemini-2.5-pro-preview-05-06). Under the 'Etiquetas' (Tags) section, three categories are shown: 'Tarea' (Task) with sub-tags 'Generación' (Generation), 'Extracción' (Extraction), and 'Reconocimiento' (Recognition).
