# Instalación de Python en Windows

▶ Instalar Python en Windows

<https://www.python.org/>

*Solo realiza este  
paso si tienes  
Windows*

Cuando instales Python no olvides  
activar la opción de agregar a Path

### ► Revisemos si está bien instalado

Abre

*una ventana de  
comandos*

Presiona esta  
combinación de teclas

Escribe

python

*debe retornar*

```
Python 3.7.0 (v3.7.0:1bf9cc5093, Jun 27 2018, 04:59:51) [MSC v.1914 64 bit  
(AMD64)] on win32  
Type "help", "copyright", "credits" or "license" for more information.
```

*Si no funciona*

<https://www.liquidweb.com/kb/how-to-install-python-on-windows/>

- ▶ Instalar PIP en Windows (No funciona si no agregaste el Path de Python)

Descarga

<https://bootstrap.pypa.io/get-pip.py>

Descarga este archivo en tu escritorio u otra carpeta

Abre

*abre una ventana de comandos*

+

*luego escribe en la ventana de comandos*

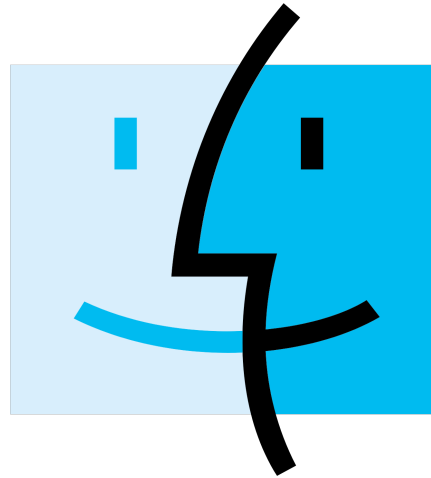

cmd

Ejecuta

`python get-pip.py` *dentro de la ventana*

Realiza este paso desde el directorio donde se encuentra el archivo get-pip.py

# Instalación de Python en Mac OS

Mac<sup>TM</sup> OS

#### ▶ Instalar Brew en **MacOS**

MacOS

Abre

Terminal.app

Ejecuta

*copia y pega en la terminal*

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install.sh)"
```

Ejecuta

```
echo "# Homebrew" >> ~/.bash_profile  
echo "export PATH=/usr/local/bin:$PATH" >> ~/.bash_profile  
source ~/.bash_profile
```

#### ▶ Instalar Python con Brew

Ejecuta

```
brew install python3
```

- ▶ Revisemos si está bien instalado

MacOS

```
mlacarrasco — -bash — 59x18
~ $which python3
/usr/local/bin/python3
~ $
```

Escribe

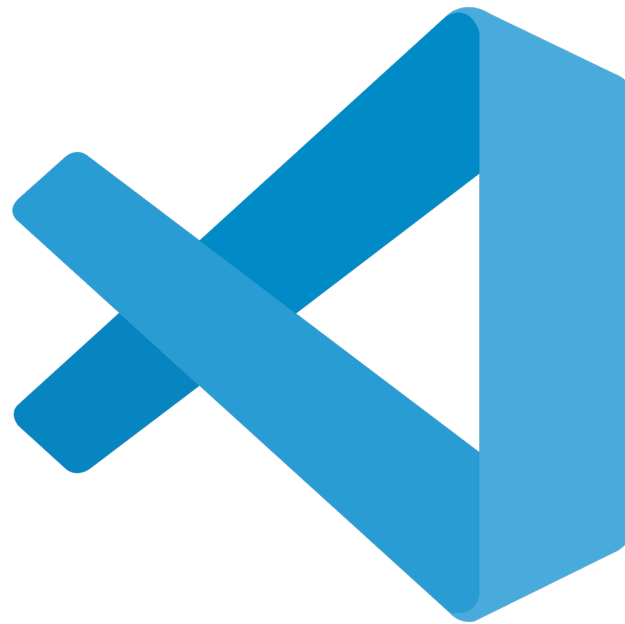

`which python3`

*debe retornar*

`/usr/local/bin/python3`

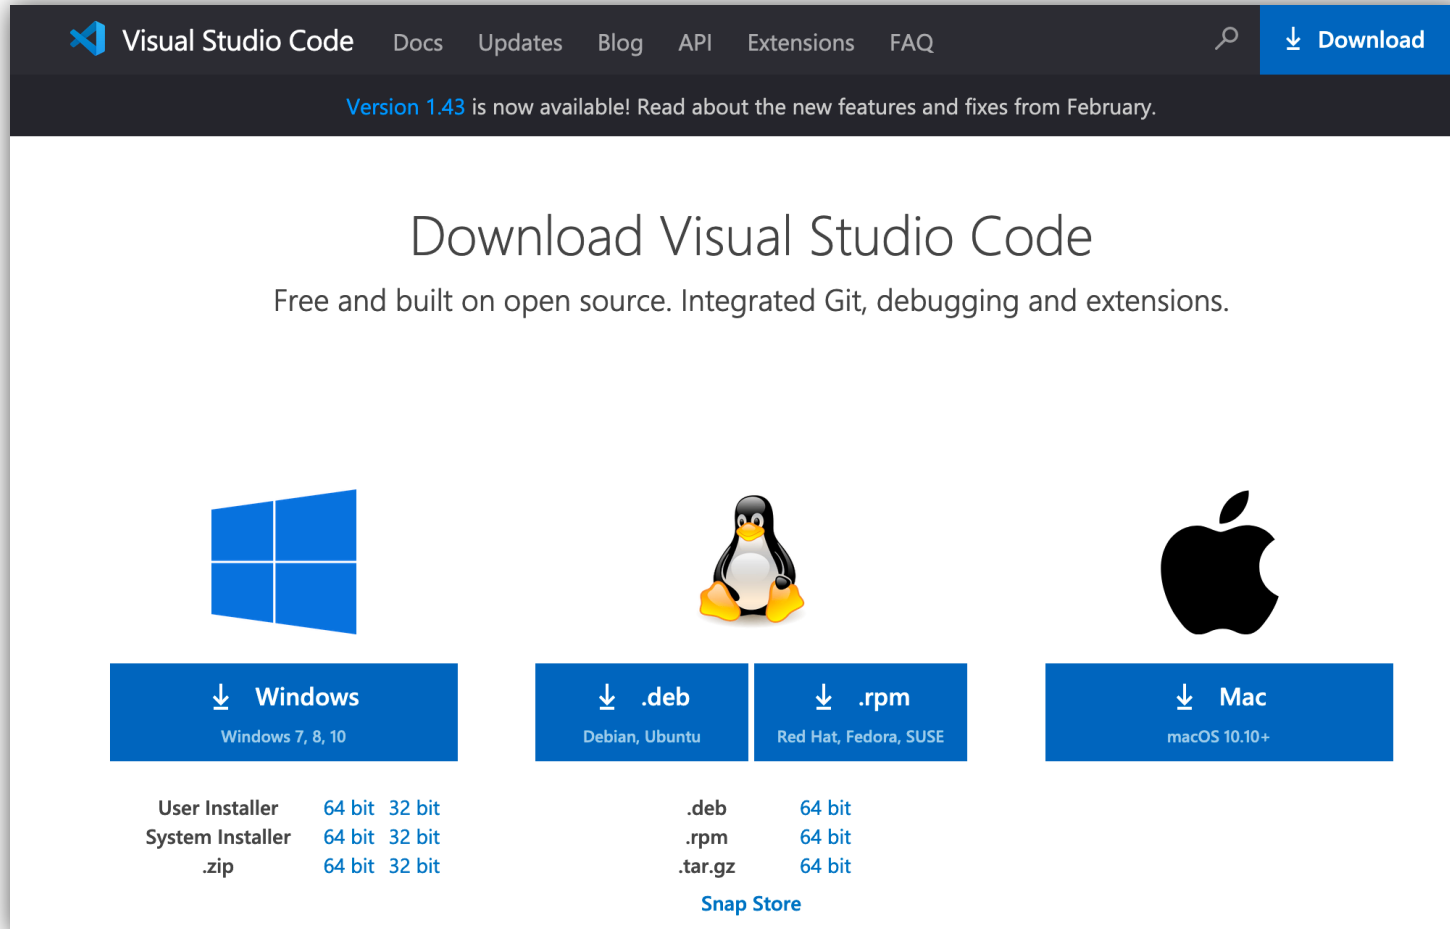

Abre una terminal y  
escribe dentro de ella

# Instalación de Visual Studio Code

► Descargar e instalar Visual Studio Code

<https://code.visualstudio.com/>

The screenshot shows the Visual Studio Code website's download page. At the top, there's a navigation bar with links for Visual Studio Code, Docs, Updates, Blog, API, Extensions, and FAQ. A 'Download' button is on the right. Below the navigation bar, a banner announces 'Version 1.43 is now available! Read about the new features and fixes from February.' The main heading is 'Download Visual Studio Code', followed by the tagline 'Free and built on open source. Integrated Git, debugging and extensions.' Below this, there are three main sections for different operating systems: Windows (with the Windows logo), Linux (with the Tux penguin logo), and Mac (with the Apple logo). Each section has a blue button with a download icon and the OS name. Under the Windows button, it lists 'Windows 7, 8, 10'. Under the Linux button, there are two sub-sections: one for '.deb' (Debian, Ubuntu) and one for '.rpm' (Red Hat, Fedora, SUSE). Under the Mac button, it lists 'macOS 10.10+'. At the bottom, there are links for 'User Installer', 'System Installer', and '.zip' for Windows; '.deb', '.rpm', and '.tar.gz' for Linux; and 'Snap Store' for Mac. Each link is followed by '64 bit' and '32 bit' options.

Version 1.43 is now available! Read about the new features and fixes from February.

## Download Visual Studio Code

Free and built on open source. Integrated Git, debugging and extensions.

↓ Windows  
Windows 7, 8, 10

|                  |        |        |
|------------------|--------|--------|
| User Installer   | 64 bit | 32 bit |
| System Installer | 64 bit | 32 bit |
| .zip             | 64 bit | 32 bit |

↓ .deb  
Debian, Ubuntu

↓ .rpm  
Red Hat, Fedora, SUSE

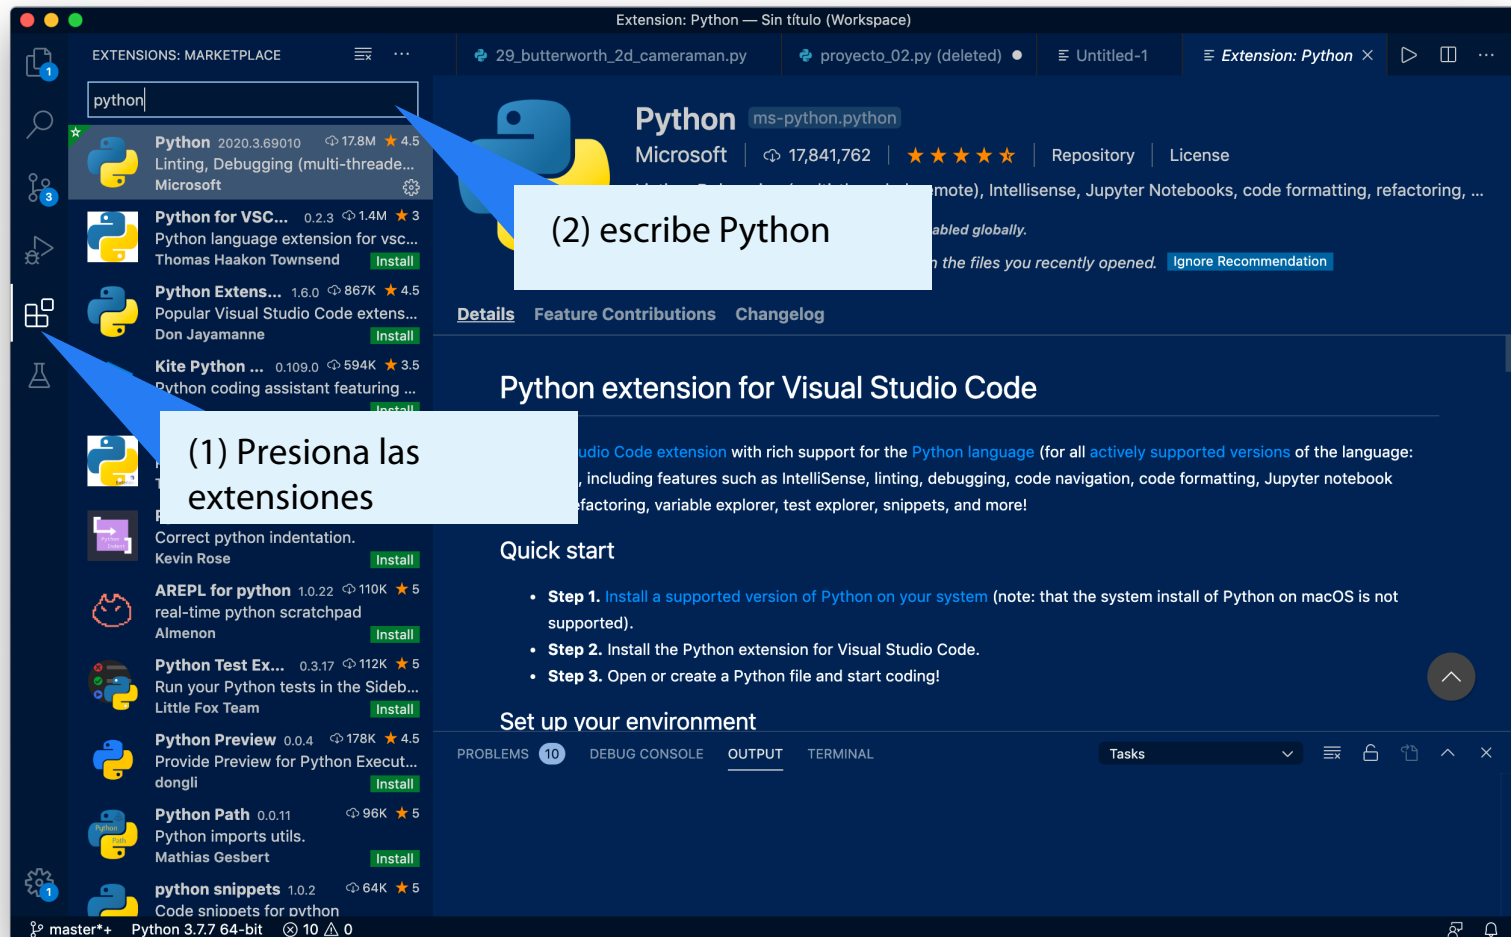

|         |        |
|---------|--------|
| .deb    | 64 bit |
| .rpm    | 64 bit |
| .tar.gz | 64 bit |

[Snap Store](#)

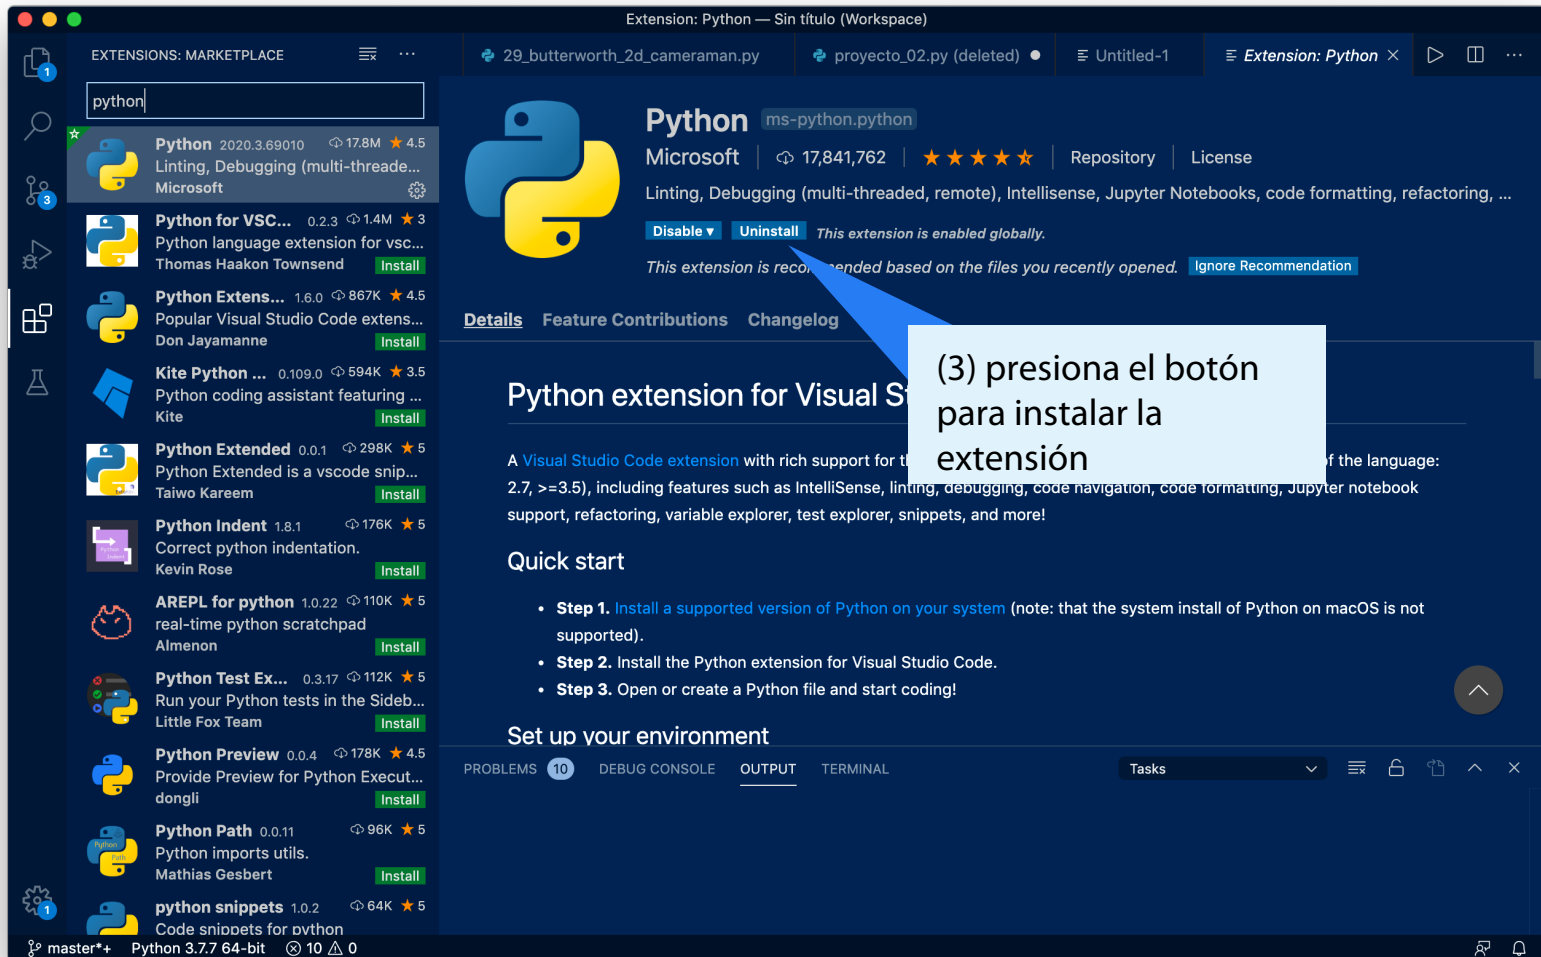

↓ Mac  
macOS 10.10+

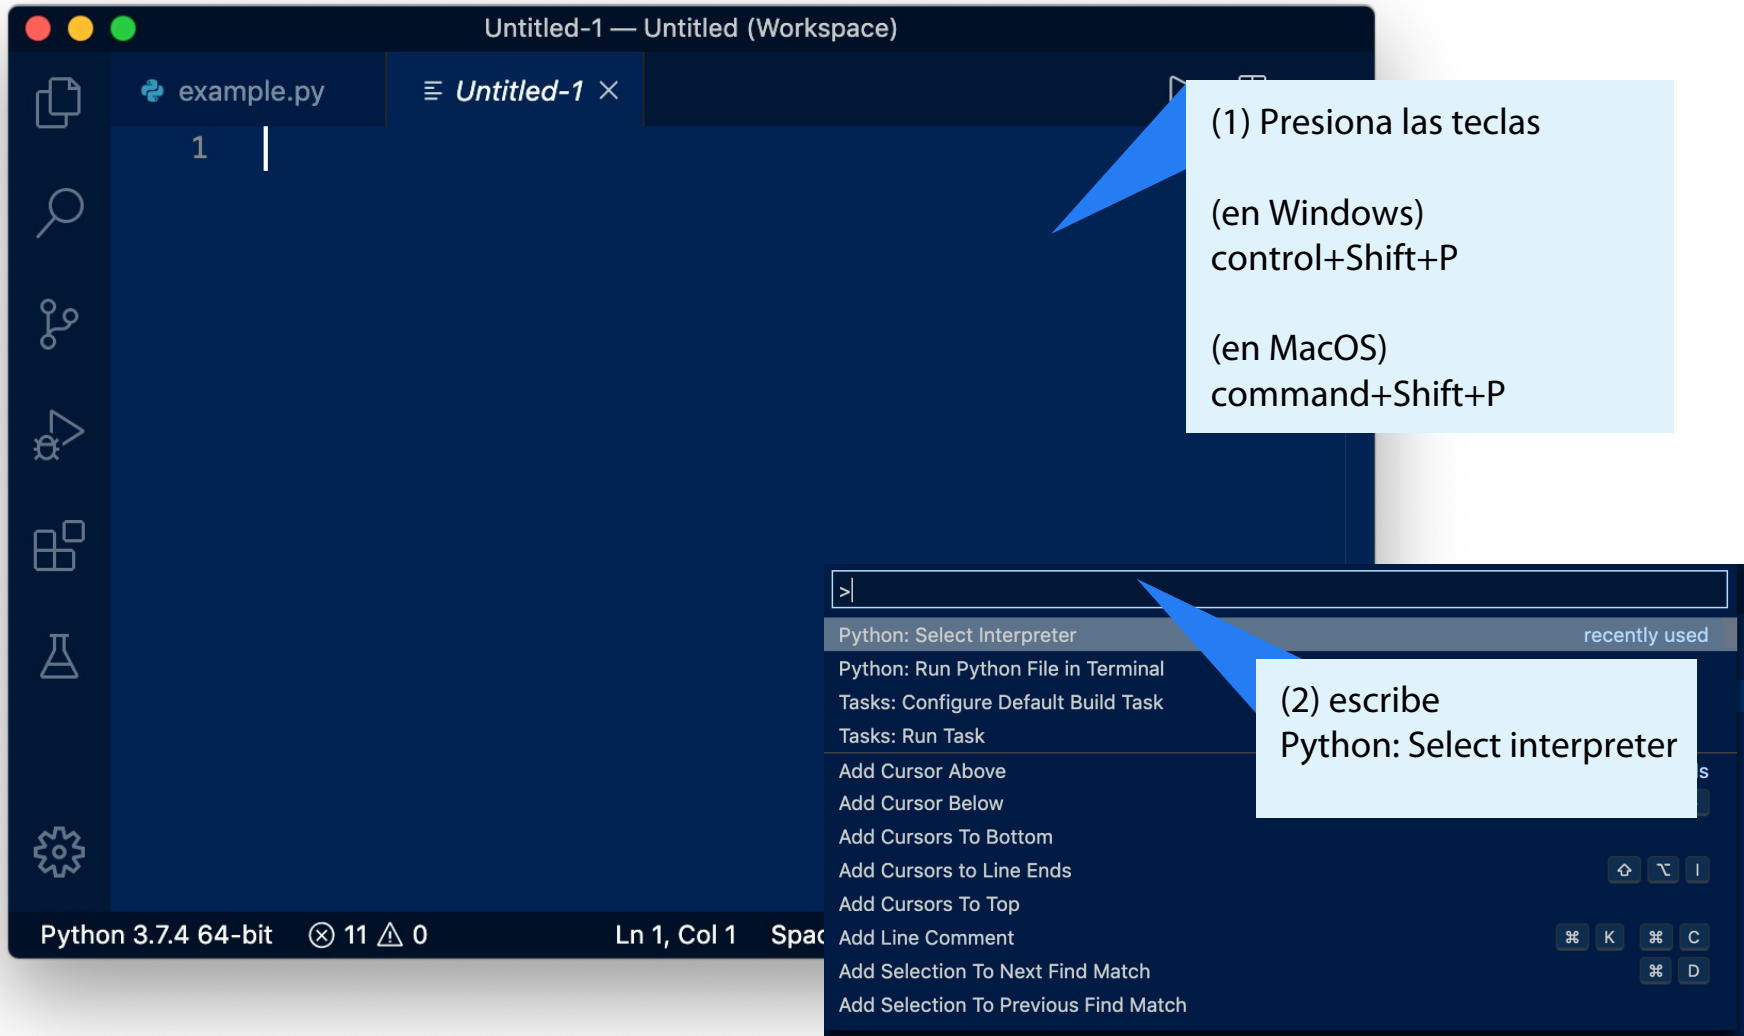

- Abre Visual Studio Code y presiona el ícono de extensión y luego escribe Python

► Instala la extensión en el botón install

- ▶ Abrir el editor Visual Studio Code), una vez que esté instalado openCV

- ▶ Selecciona la version correcta de Python instalada en tu equipo

The screenshot shows the Visual Studio Code interface. The command palette is open, displaying a list of commands. The command 'Python: Select Interpreter' is highlighted. A blue callout box points to this command with the text '(2) escribe Python: Select interpreter'. Below the command palette, a list of Python interpreters is shown. The first interpreter is 'Python 2.7.16 64-bit /usr/bin/python'. The second is 'Python 3.7.4 32-bit /usr/local/bin/python3-32'. The third is 'Python 3.7.7 64-bit /usr/local/opt/python/libexec/bin/python', which is highlighted. A blue callout box points to this highlighted interpreter with the text '(3) selecciona Usr/local/opt/python/libexec/bin/python'. The current interpreter is shown as 'current: /usr/local/bin/python3.8'.

(2) escribe  
Python: Select interpreter

current: /usr/local/bin/python3.8

Python 2.7.16 64-bit  
/usr/bin/python

Python 3.7.4 32-bit  
/usr/local/bin/python3-32

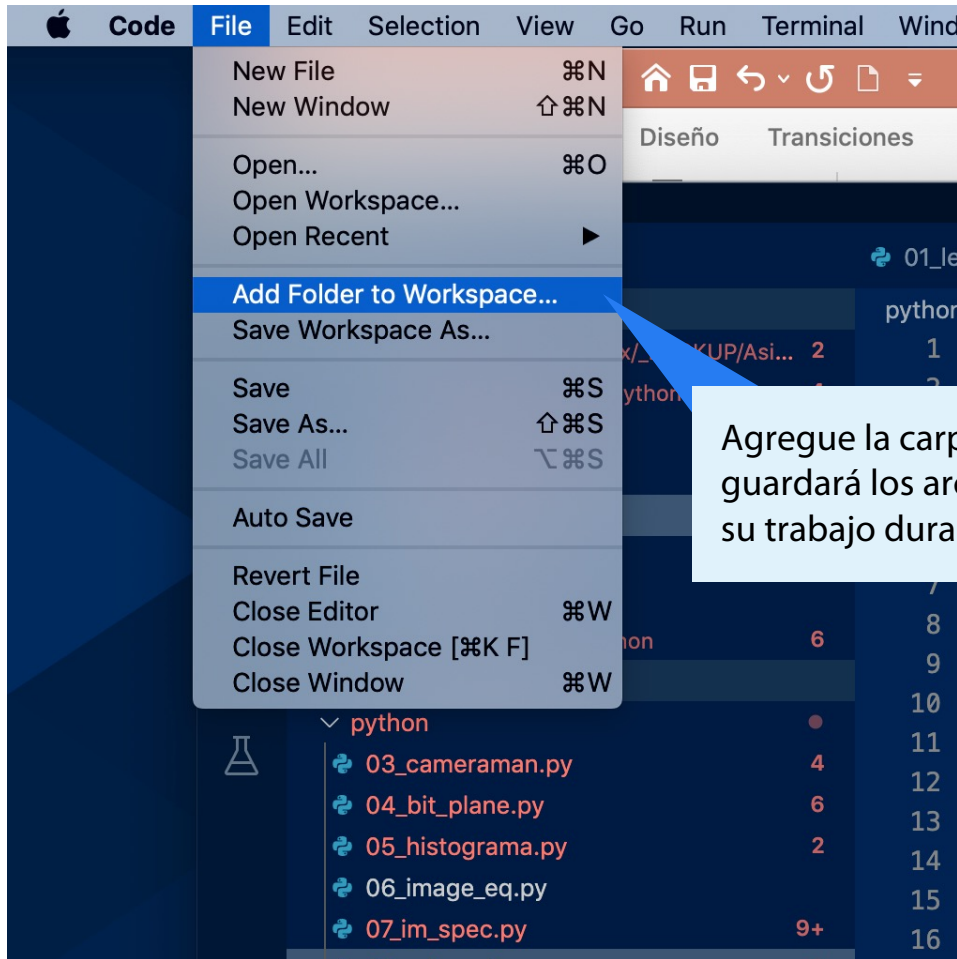

Python 3.7.7 64-bit  
/usr/local/opt/python/libexec/bin/python

Python 3.7.7 64-bit  
/usr/local/bin/python3

Python 3.7.7 64-bit  
/usr/local/opt/python/bin/python3

Python 3.8.2 64-bit  
/usr/local/bin/python3.8

(3) selecciona  
Usr/local/opt/python/libexec/bin/python

Agregue la carpeta donde usted guardará los archivos de Python de su trabajo durante el semestre
